### Website Critique

The internet has become a common medium of access to information for many people around the world. This has led to the creation of various websites by respective agencies and entities which act as a gateway to the information and various services. However, in order to design and develop a good and stable website, there are various requirements and factors that should be met. They include domain name, hosting, security, target audience and goals among others. The following paper comprises of a web critique that examines the purpose of the site, specific information that is obtained from the site that is helpful and general impressions that are based on the site.

The following part is based on the purpose of the site that the entire paper is based on. The uniform resource locator (URL) of the website is outlined as; [www.ceismc.gatech.edu/busyt](http://www.ceismc.gatech.edu/busyt). The website contains resources that are based on different areas in academics. The website is owned by the Georgia Institute of Technology and all the information that is availed is pertinent to the learners and the staff in the institution (Georgia Tech, 2018). The information that is availed is useful to the learners since it helps them in the learning process and also encourages personal growth and development. The website also offers a good platform through which the institution and the teachers can pass of knowledge and information to all the learners with ease.

The Georgia Tech aims at integrating science, computing, and mathematics and with such a website, it is very easy for the institution to achieve this objective. Having read through the information that is provided in the site, I found some of it to very useful not only to me but also to other learners, members of the staff as well as the parents. The information provided that is based on the importance of taking a role a student assistant while one is a student has widened the perspective that I have towards this issue. Rosemary narrates on the importance of being a

student assistant where it is evident that this gives an individual the opportunity to learn new skills and also gain experience.

The idea of becoming a student assistant has really made sense to me and I am definitely considering becoming a student assistance for the time that I am left with in school. I have also acquired information based steam education which promotes innovation and education based on the subject. I intend to further discuss this information with my classmates to see what we can do with the knowledge acquired based on steam education (Atlanta, 2018). Reading on various projects that have been presented by other students have also taught me new things and also insights that are useful as I undertake my studies. Basically, I have learned how to use a microcontroller and I will apply this knowledge in coming up with various projects.

The next part is based on general impressions that I have acquired based on the site. Based on the content that is provided, the website is very resourceful and informative. I have just given a few examples of information that I tend to use in class both personally and together with other members from our class. Basically, I like the manner in which the entire platform is presented. One can easily navigate through the website as they try to find information. The website has a clear purpose and target audience. One can clearly see that the website is designed for the purposes of learning educational institution which makes it a good and reliable source of information (Optimus Ltd, 2018).

Personally, I do not have several issues with the website. However, I suppose that the designers should incorporate more pictures and videos since they are more appealing. The intuition should also work on the websites to help increase the ratings so as to promote optimization of the search results by various search engines. However, for an educational institution, the website is not only good but also resourceful.
